Contact Person: George Caraway, Director of Marketing, 800-220-2522, 507-372-3567

#### **Swine Disease Diagnostic Manual available from Newport Laboratories**

WORTHINGTON, MN – Newport Laboratories has created a valuable tool to help swine veterinarians and producers in diagnosing major swine diseases. The “Swine Disease Diagnostic Manual” is a 36-page, full-color publication containing information on 19 major swine diseases, necropsy instructions for various stages of production, and guidelines on diagnostic sample submission.

Manuals are available in either English or Spanish versions.

The primary focus of the Manual is disease information. For each of the 19 diseases covered, the book includes pictures of affected tissues/areas, clinical signs, stage of production during which the disease generally appears, how it is diagnosed, and what specimens to submit to the diagnostic laboratory.

Necropsy instructions for both nursery and grower/finisher pigs are included, with large color photos demonstrating each step in the process. An additional page showing basic anatomy, including the location of major organs, is also included.

The book also includes a section on diagnostic sample submission. Twenty-two diseases/conditions are listed, with proper specimen selection, sample preparation, and laboratory procedures given for each one. Diagnostic sample submission forms, including both traditional and molecular-based diagnostics, are included as well.

The Manual is designed for use in either the barn or laboratory. All pages are laminated for durability, and the book is contained in a three-ring binder. It can be opened flat for ease of reading. Both the binder and each page are water repellent, and can simply be wiped down to keep clean.

The Manual’s cover can be personalized with a veterinarian/producer’s name as well as their clinic/farm name. Each manual costs \$29.95 plus shipping, and can be ordered directly from Newport Laboratories by calling 1-800-220-2522.
