

## Moisturizing Pig Wash **DERMA SOAK™**

### **Why Wash?**

- Skin cleaning is good husbandry
- It's a simple, economic way to help pigs perform at their best

### **The Gentle, All-Natural Answer**

- Easier on skin than hard surface cleaners – DermaSoak does not use harsh cleaning chemicals
- Ingredients are approved as direct and indirect food additives:
  - Lauricidin™ (Glycerol Monolaurate): moisturizes and helps the skin retain water
  - Caprylic Acid/Capric Acid: naturally occurring fatty acids that enhance the cleansing action
  - Lactic Acid: keeps skin from cracking by acting as a plasticizer
- Easy to mix and apply
- Moisturizes and conditions as it cleans
- Biodegradable

### **DermaSoak is Easy to Use**

- Mix one part DermaSoak concentrate with seven parts potable water
- Remove dirt, manure, and debris from pig skin
- Apply diluted DermaSoak liberally to pig (at least 1.5 oz.)
- Allow pigs to air dry – do not rinse off

### **DermaSoak is Economical**

- Just pennies per pig
- Lasting residual value

Lauricidin™ is a registered trademark of MedChem Inc.

**Keep your young  
pigs clean, happy,  
and healthy with  
DermaSoak™  
moisturizing pig  
wash, available  
exclusively from  
Newport Laboratories.**
